Introduction

Introduction

- Introducing the Tunisian Tapestry API: a platform inspired by the intricate beauty of a physical tapestry.
- Rich, diverse, and interconnected collection of ideas, experiences, and events offering a window into Tunisian culture.
- A platform for Tunisian events and cultural celebrations, providing visibility and engagement opportunities.
- Bringing Tunisian heritage into the light, connecting communities with the vibrant tapestry of Tunisian culture.

Problem Statement

Problem Statement

- Tunisian events are underrepresented on major global platforms.
- Limited visibility and reach, even within local communities.
- Local culture is underappreciated, leading to insufficient support for artists.
- Stagnation in the entertainment industry.
- Low appeal to tourism.

Need: A critical need exists for a Tunisian events platform to shine a spotlight on our cultural manifestations, fostering heightened community engagement.

Value Proposition

"Tunisian Tapestry" is a dynamic and user-friendly events explorer API designed to unlock the full spectrum of Tunisia's cultural richness. With an extensive database of Tunisian manifestations, users gain exclusive access to a wide variety of events, from traditional celebrations to contemporary art exhibits.

Impact and Benefits

Impact and Benefits - Part 1

- ○ **Community Empowerment:** Create a dynamic community that actively supports Tunisian art and culture.
- ○ **Empowering Artistic Expression:** Support local artists by providing a platform that amplifies their work.
- ○ **Stimulating the Entertainment Industry:** Create a vibrant landscape benefiting artists, audiences, and the broader cultural community.

Impact and Benefits - Part 2

- ○ **Tourist Allure:** Showcase Tunisia's cultural richness globally, attracting tourists and contributing to the expansion of the tourism sector.
- ○ **Empowering Economy:** Drive economic prosperity by revitalizing the local entertainment industry and creating opportunities for thriving cultural businesses.
- ○ **Impactful Well-being:** Recognize the profound impact of cultural engagement on community well-being.

Key Features

Key Features

- **Flexible Login Options:** Users can sign in using their credentials or conveniently use their Google accounts for streamlined authentication.
- **Event Access:** Explore and access details about all events within the system.
- **Bookmarking and Personalized Lists:** Bookmark any event and create a personalized list for quick access.
- **Ticket Purchase:** Simplify the event experience by providing a direct ticket purchase feature through the platform.
- **Event Creation:** Users can actively contribute to our community by creating and showcasing their events.

Conclusion

Conclusion

The motivation driving our API is deeply rooted in its profound impact on both the community and the entertainment industry. Aligning with existing resources, we have strategically prioritized the implementation of essential features. As we move forward, we envision a vast potential for optimization and enhancement in areas such as data access, interface design, and user experience. Looking ahead, our goal extends to reaching a broader audience, with global expansion firmly positioned on our roadmap.

Any Questions?

Appendix

Appendix

The screenshot displays a REST client interface with the following details:

- Method:** POST
- URL:** http://localhost:5000/register
- Body:** A JSON object with the following fields:

```
{ 1: { 2: "username": "salima", 3: "email": "salima@gmail.com", 4: "password": "salima123" 5: } 6: }
```
- Response:** A 201 CREATED status with a response time of 15 ms and a body size of 234 B. The response body is a JSON object:

```
{ 1: { 2: "message": "Account created successfully! You can now log in." 3: }
```

The screenshot displays a REST client interface with the following details:

- Method:** POST
- URL:** http://127.0.0.1:5000/create_event
- Body Type:** JSON
- Request Body:**

```
1 {
2   "title": "Tunisian Literature Festival",
3   "description": "celebrating the rich literary heritage of Tunisia",
4   "date": "2024-11-20 00:00",
5   "location": "Tunis",
6   "category": "Literature",
7   "image": "https://example.com/image8.jpg",
8   "tickets_available": 150,
9 }
```
- Response:** 201 CREATED, 49 ms, 212 B
- Response Body (Pretty):**

```
1 {
2   "message": "Event created successfully!"
3 }
```

Creating an Event

The screenshot displays a REST client interface with the following components:

- Request Bar:** Method `GET` and URL `http://127.0.0.1:5000/search_event?title=Tunisian%20Literature%20Festival`.
- Params:** Tab selected, showing no parameters.
- Authorization:** Tab selected, showing `Bearer ...` with a dropdown arrow.
- Headers:** Tab selected, showing a warning: "Heads up! These parameters hold sensitive data. To keep this data secure while we collaborative environment, we recommend using variables. Learn more about [variables](#)". The header `Token` is set to `eyJhbGciOiJIUzI1NiIsInR5cCI6Ikp...`.
- Body:** Tab selected, showing the response in JSON format.
- Response Status:** `200 OK`, `11 ms`, `430 B`, with a `Save` button.
- Response Body:** A JSON object with the following fields:

```
1 {
2   "category": "Literature",
3   "date": "2024-11-20T00:00:00",
4   "description": "celebrating the rich literary heritage of Tunisia",
5   "image": "https://example.com/image8.jpg",
6   "location": "Tunis",
7   "ticket_price": 40.0,
8   "tickets_available": 146,
```

Search an event

Appendix

The screenshot displays a REST client interface with the following details:

- Method:** POST
- URL:** http://127.0.0.1:5000/purchase_ticket/8
- Body:** A JSON object with the key "num_tickets" and the value 4.
- Response:** A 201 CREATED status with a response body containing a "message" field: "4 ticket(s) purchased successfully!".
- Performance:** 138 ms, 220 B.
- Actions:** Save, Pretty, Raw, Preview, Visualize, JSON.

```
